

Triangles and Islam

The Islamic use of astronomical instruments has been a large influence to the western world

The Islamic world used some advanced mathematics known as trigonometry.

- This is all to do with triangles
- We can explore some of the things they did by using some more simple properties of triangles.

Find out more

- The red button will tell you more about the properties of triangles
- The blue button will explain how the Islamic world used this knowledge to great effect.
